

HOW WE TRACE FROM BLUEPRINT TO TRANSPORT

One step of the Vortex trace, in its real numbering.

Ten rows drawn straight from Vortex Build Run Book -> Build Components sheet. Every technical object has a step number, a domain (which maps to one of the three blueprints - IC, JV, UJ), the T-code or IMG path it configures, a description, and the exact technical-spec section it implements. Each row is what carries downstream into DEV unit testing, QAS testing, transport, and cutover evidence. The full workbook has 94 rows of this trace for phase 2 alone.

#	BP	DOMAIN	T-CODE / IMG PATH	DESCRIPTION	TECH SPEC SECTION
1	IC	ICMR	/SMB/BBI	1SG & 40Y- Implementation of SAP S/4HANA Best practice for Group Reporting & ICMR	Best Practice (BP) activation in DEV
2	IC	ICMR	/N/IWFND/MAINT_SERVICE	ODATA activation for ICMR and JV Fiori Apps	Configuration_ODATA & Fiori App Test Results_DEV_1.0
3	JV	JV Workflow Design	Workflow Enhancement	Trigger Fiori Workflow in GL Upload program.	3.5.12 GL Upload program enhancement
4	UJ	Document splitting	SE19 - BADI Implementation	BADI - ZFINS_SIS_OPITEMS - Implementation: Document Splitting Information for Open Items	3.3.14 Enhancements and Substitution Logic
5	UJ	Document splitting	SE19 - BADI Implementation	BADI - ZFINS_SIS_BAL - Implementation: Subseq. Impl. of Document Splitting: Enrichment of opening balances	3.3.14 Enhancements and Substitution Logic
6	UJ	Document splitting	SNOTE	SAP Note 3468129- FINS_SIS_BAL_EXCEL export file not formatted correctly	
7	IC	ICMR	SNOTE	SAP Note - 3416798 - Show detailed message in Matching Run job logs	
8	UJ	Document splitting	Enterprise Structure • Definition • Financial Accounting • Segment T-Code: S_ALO_19000003	Segments are used for segment reporting. When profit centers are defined, each profit center master record includes an assigned segment, and this segment is automatically derived from the profit center during posting.	3.3.1 Define Segment
9	UJ	Document splitting	SM30, Table/View - V_FAGL_SEGM_PRCT	Control whether the segment field in profit center master data can be changed after creation. In this step, the setting is enabled so that segment assignments on existing profit centers can be adjusted when required for reporting or realignment.	3.3.2 Enable Segment Change in Profit Center
10	UJ	Document splitting	KE55	Profit Center Mass Maintenance to Update Segment: Updating the segment field for multiple profit centers	3.3.3 Profit Center Mass maintenance to update Segment

Each numbered step above continues in its own tab downstream: DEV unit testing (e.g. ICCLEAR01-08, ICMR01-04, JVWF01-07, COPA01-08, DOCSPLIT01-38, ICAUTO01-19), QAS testing, transport numbers (DEVK936xxx / DEVK937xxx), transport validation, and cutover evidence - each with its named owner and QA status.
