

A Datasphere Small-Unit Motion for SAP Account Executives

Partner brief — for the SAP AE who has a customer stuck between an expiring trial and a stalled presales cycle.

Reader: an SAP Account Executive in presales architecture **Carrier:** Jeff Eden — EVEglyphDesign services executive; [linkedin.com/in/jeffeden](https://www.linkedin.com/in/jeffeden) **Public counterpart of a private engagement note.** Client-side names and commercial figures are held in a private repository. Everything on this page is either publicly stated by SAP, publicly stated by EVEglyphDesign on its own surfaces, or generic to the AE's own book of business.

The one sentence to walk in saying

"I have a partner who can go in on your customer's demo tenant, stand up Datasphere and SAC against the customer's own data in weeks, and hand them back a live report before you ever ask for a purchase order — so your first meeting after the trial is a licensing conversation, not another proof-of-concept debate."

The customer situation the AE already knows

- **Classic SAP BW 7.5** — mainstream maintenance ends **31 December 2027**, extended maintenance ends **31 December 2030** ([SAP · BW/4HANA End of Mainstream Maintenance Key Dates](#); [SAP · NetWeaver 7.5 & BW/4HANA Maintenance Strategy](#)).
- **SAP BW/4HANA** — maintained through at least 2040, but the innovation gravity has shifted to Datasphere and SAC ([SAP · maintenance strategy](#)).
- **SAP Analysis for Microsoft Office (AfO)** — the Excel front-end most BW customers live in. The successor motion SAP is pointing to is the **SAP Analytics Cloud add-in for Microsoft 365**.
- **Datasphere + SAC** — the sanctioned successor stack. A **30-day free Datasphere trial** on a shared tenant with sample data ([SAP · Experience SAP Datasphere](#)) and a **free SAC trial** ([SAP · Analytics Cloud trial](#)) exist — but a trial on sample data is not the same as a working report against the customer's own P&L.

The presales challenge is not the story. Every SAP AE tells this story. The challenge is the demo. Trials expire before customer IT has finished the network paperwork; sample data does not move a CFO; and

the AE's SIs typically cannot spin up a real customer-data demo without a full statement of work, at which point the deal has already stalled.

The gap is not architecture. It is presales execution capacity in bounded units.

What EVEglyphDesign already did at Epiq

Delivered work, not a proposal. The public evidence is on our own surfaces:

- **A Contract-to-Cash semantic layer in SAP Datasphere** on the customer's own data, delivered inside a partnership Steel Cloud Solutions led. Systems in scope included SAP S/4HANA, Workday, Salesforce, Bullhorn, and AWS S3/Lake.
- **A cross-system AI agent** — LangGraph reasoning against Datasphere's OData surface, with the compliance controls the architecture required.
- **Delivery through Microsoft Teams** — the users' existing interface. No new client to roll out.
- **A public demonstration surface** — [epiq-revenue-leakage](#) carries the non-proprietary reconciliation views and the shape of the work.
- **A public reference model** — [eve-datasphere-sovereign](#) is an ACDOCA-anchored SAP replication schema covering 58 tables across FI, CO, MM, SD, PP, PM, and QM.

Both surfaces are public. The AE's team can read them today without an NDA.

Four packaged small work units

Each one is quotable in a sentence, deliverable in weeks, and exit-friendly. We arrive, we set up, we hand back, we leave.

1 · Datasphere Demo-Tenant Setup on the Customer's Own Data

The customer sees their own P&L — one operating region, one product family — running inside their trial Datasphere tenant, connected to their SAP source system through their sanctioned integration path. Not sample data.

Duration: 3–4 weeks. **Shape:** fixed price. **Exit:** we hand back the tenant, the models, and a short compliance brief.

2 · AfO-to-SAC Report Parity Sprint

The customer's five most-used Analysis for Office reports — reproduced in the SAC add-in for Microsoft 365 — running against the same numbers, on the same schedule, with the same drill paths.

Duration: 4–6 weeks. **Shape:** fixed price per report bundle. **Exit:** we hand back the SAC content and a runbook.

3 · Governed Finance Proof (the Epiq Shape)

A working Teams agent that answers finance questions across the customer's SAP estate, with source citations and governance controls — the pattern delivered at Epiq, adapted to the customer's data and one finance lane they choose (revenue leakage, close acceleration, invoice reconciliation).

Duration: 6–8 weeks. **Shape:** fixed price with a small optional continuation. **Exit:** we hand back the pattern and the operating notes.

4 · BW Replacement Proof

A bounded proof that Datasphere + SAC can perform a defined slice of what the customer's BW installation performs today — validated by the customer's own users, documented, and with any exceptions explicitly listed.

Duration: 6–10 weeks. **Shape:** fixed price with named outcomes. **Exit:** we hand back the proof, the reconciliation, and the decision brief.

The commercial shape

- **The AE refers.** They send a customer stalling in Datasphere or SAC presales.
- **EVEglyphDesign executes on the customer's demo license.** The 30-day Datasphere trial and free SAC trial are the runway. The AE does not procure. The customer does not sign a large statement of work.
- **The setup is packaged, fixed-price, and exit-friendly.** One of the four above.
- **The AE closes the license.** The customer has now seen their own numbers running in Datasphere and SAC.
- **Further build work is a referral back to the incumbent SI**, or to EVEglyphDesign only if the customer has no incumbent and needs an affordable alternative — the referral always in service of the AE's SAP license booking.

On full S/4HANA implementation work

Full S/4HANA implementations belong with a large SI. EVEglyphDesign fits inside a full S/4 conversation only as:

- **Flex labor supporting the incumbent SI** — named specialists, monthly floor, on the SI's paper if they want it.

- **An affordable alternative** — only if the customer has no incumbent and cannot fund a large SI. Stated plainly, not as a poaching move.

In both cases, the deal the AE cares about — the SAP license — is the deal being sold.
